INDEX TO VOLUME 288

July–December 1969

SUBJECT INDEX

Papers are listed under subject headings with authors' names in parentheses following title of paper. Authors are listed with titles of their papers in alphabetical order in the Author Index. Entries with (BC) are Brief Communications.

A

Algebra. Some extensions of the congruence concept for incomplete non-deterministic automata (Yeh), 499

Amplitude modulation theory. Interaction of input and output filters of a ring-type frequency translator (Keblawi), 393

Analytical methods of nonlinear mechanics. On an asymptotic method of Krylov–Bogoliubov for overdamped nonlinear systems (Murty, Deekshatulu & Krishna), 49

Applied mathematics. Dynamic control of biharmonic processes (Kim), (BC), 415

Two numerical methods that converge to the method of least squares (Langhaar), 165

Applied mechanics. The Laplace transform of the derivative of a function with finite jumps (Bahar), 275

Approximation by square waves. Some orthogonal functions which are linear combinations of square-wave functions (Sox & Harrington), 43

Asymptotic methods in nonlinear systems. On an asymptotic method of Krylov–Bogoliubov for overdamped nonlinear systems (Murty, Deekshatulu & Krishna), 49

Automata theory. Some extensions of the congruence concept for incomplete non-deterministic automata (Yeh), 499

B

Bandpass filters. A tuneable bandwidth-adjustable, solid-state filter (Glaser, Halkias & Meadows), 83

Book Reviews

Bartley, W., L. M. Birt and P. Banks: The biochemistry of the tissues, 158

Bohr, A. and B. R. Mottelson: Nuclear structure, Vol. 1, 505

Burhop, E. H. S. (edited by): High energy physics, Vol. I, 239

Eyering, L. (edited by): Progress in the science and technology of the rare earths, Vol. 3, 240

Flores, I.: Computer programming, 505

Formby J.: An introduction to the mathematical formulation of self-organizing systems, 77

Fowler, W. B. (edited by): Physics of color centres, 239

Book Reviews (continued)

Goldanski, V. I. and R. H. Herber (edited by): Chemical applications of Mössbauer spectroscopy, 331

Goodman, R. and I. Segal (edited by): Mathematical theory of elementary particles, 73

Greenspan, D. (edited by): Numerical solutions of nonlinear differential equations, 159

Greenspan, H. P.: The theory of rotating fluids, 241

Griffith, W. P.: The chemistry of the rarer platinum metals, 159

Gruverman, I. J. (edited by): Mössbauer effect methodology, Vol. 4, 71

Hadni, A.: Essentials of modern physics applied to the study of the infrared, 158

Hudson, R. D.: Infrared system engineering, 330

Jordan, T. F.: Linear operators for quantum mechanics, 507

Kutateladze, S. S. and A. I. Leont'ev: Turbulent boundary layers in compressible gases, 157

Leontovich, M. A. (edited by): Reviews of plasma physics, Vols. 3 and 4, 75

Loebl, E. M. (edited by): Group theory and its applications, 157

Lurié, D.: Particles and fields, 71

Mark, H. and S. Fernback (edited by): Properties of matter under unusual conditions, 328

Matthias, E. and D. A. Shirley (edited by): Hyperfine structure and nuclear radiations, 72

Naylor, T. H., J. L. Balinfy, D. S. Burdick and K. Chu: Computer simulation techniques, 77

Papoular, R.: Electric phenomena in gases, 241

Papoulis, A.: Systems and tranforms with applications in optics, 328

Winjn, H. P. J. (edited by): Encyclopedia of physics (Handbuch der Physik), Vol. 18, Part 1, 327

Zemanian, A. H.: Generalized integral transformations, 329

C

Circuit theory. Flowgraph analysis of linear systems using remote time-shared computation (Dunn & Chan), 337

Combined free and forced convection. Combined free and forced convection with two-dimensional solidification over a horizontal semi-infinite plate (Miller & Jiji,) 223
Compensation of nonlinear systems. A compensation technique for certain nonlinear autonomous systems (Monier), (BC), 319
Computors, matric, equisolution formulations. Equisolution matrices for the matric computor (Honnell & Mulholland), 261
Control theory. Stability analysis for a fourth-order nonlinear discrete-time system (Raju & Li), (BC), 67
Creep rupture. Problems in all-paper construction: A pilot study (Spillers & Testa), 443

D

Distributed effects in microcircuits. Generalized non-uniform transmission lines and their equivalent electrical length (Holt, Ahmed & Bowron), 31
Distributed parameter networks. Immittance characterization of tapered multiple layer RC lines (Bassett), 453
Distribution theory. The Laplace transform of the derivative of a function with finite jumps (Bahar), 275
Dynamic circular loading. Rigid–plastic analysis of a simply supported circular plate due to dynamic circular loading (Conroy), 121
Dynamics. On the elastic stability of Coriolis-coupled oscillations of a rotating disc (Doby), 203

E

Elastic instability. Surface instability of a half-space under high two-dimensional compression (Nowinski), 367
Elastic stability. On the elastic stability of Coriolis-coupled oscillations of a rotating disc (Doby), 203
Electrodynamics, generation of solutions from static solutions. On the possibility of generating solutions to electromagnetic problems from known solutions of corresponding static problems (Huey & Liu), 137
Electromagnetic problems, correspondence with static problems in six coordinate systems. On the possibility of generating solutions to electromagnetic problems from known solutions of corresponding static problems (Huey & Liu), 137
Electromechanics. Power-conserving transformations: physical interpretations and applications using bond graphs (Karnopp), 175
Equivalent circuit of modulators. Interaction of input and output filters of a ring-type frequency translator (Keblawi), 393
Error correcting networks. Synthesis of error correcting threshold gate networks (Bargainer & Coates), 377

F

Feedback control. Dynamic control of biharmonic processes (Kim), (BC), 415
Finite elasticity. Surface instability of a half-space under high two-dimensional compression (Nowinski), 367
Fourier analysis. Some orthogonal functions which are linear combinations of square-wave functions (Sox & Harrington), 43

G

Graph theory. Flowgraph analysis of linear systems using remote time-shared computation (Dunn & Chan), 337

H

Helmholtz equation, correspondence of solutions of Laplace and. On the possibility of generating solutions to electromagnetic problems from known solutions of corresponding static problems (Huey & Liu), 137

I

Impedance transformation. Interaction of input and output filters of a ring-type frequency translator (Keblawi), 393
Integral differential equations. On the solutions of finite dimensional time-invariant transport equations (Wang), 115
Integral transform theory. The Laplace transform of the derivative of a function with finite jumps (Bahar), 275

L

Liapunov stability in stochastic systems. Stochastic stability in nonlinear oscillating systems (Ku), 305
Limit cycles. Limit cycles with stability of the first level, (BC), (Gurel), 235
Linear discriminant function. On a convex function useful in determination of linear discriminant functions (Butz), 291
Linear systems. A tuneable bandwidth-adjustable solid-state filter (Glaser, Halkias & Meadows), 83

M

Mathematical programming. Comparison of some conjugate direction procedures for function minimization (Sorenson), 421
Matric computor, equisolution matrices. Equisolution matrices for the matric computor (Honnell & Mulholland), 261
Matrices, equisolution, for matric computor. Equisolution matrices for the matric computor (Honnell & Mulholland), 261
Microwave networks. Generalized non-uniform transmission lines and their equivalent electrical length (Holt, Ahmed & Bowron) 31

VOL.
288
1969

N

Network analysis. A general N-terminal network equivalent (Reed & Brown), 483

Network analysis and synthesis (design). Flowgraph analysis of linear systems using remote time-shared computation (Dunn & Chan), 337

Network theory: A general N-terminal network equivalent (Reed & Brown), 483

A tuneable, bandwidth-adjustable solid-state filter (Glaser, Halkias & Meadows), 38

Generalized non uniform transmission lines and their equivalent electrical length (Holt, Ahmed & Bowron), 31

Immittance characterization of tapered multiple layer RC lines (Bassett), 453

Networks. A general N-terminal network equivalent (Reed & Brown), 483

Non-Gaussian patterns and their recognition. A sequence of probability functions on the Euclidean n-space and its limit (Ahmed & Glinski), (BC), 151

Non-Gaussian probabilities. A sequence of probability functions on the Euclidean n-space and its limit (Ahmed & Glinski), (BC), 151

Nonlinear analysis. Stability analysis for a fourth-order nonlinear discrete-time system (Raju & Li), (BC), 67

Nonlinear control systems analysis. On the evaluation of the response of nonlinear systems by functional series expansion of forced and free responses (Marchesini & Picci), 469

Nonlinear homogeneous differential equations. A compensation technique for certain nonlinear autonomous systems (Monier), (BC), 319

Nonlinear networks. Stability criteria for nonlinear RLC networks (Goldstein & Frank), 351

Nonlinear partial differential equations. A class of periodic solutions to the two dimensional cubic differential equation (Silberg), 17

n-port network synthesis. Realization of nth order matrices with two-tree port structures (Jambotkar & Tokad), 245

Numerical analysis. Two numerical methods that converge to the method of least squares (Langhaar), 165

Numerical evaluation of time responses. Numerical method for transient responses of linear networks with lumped, distributed or mixed parameters (Vlach), 99

Numerical methods. Two numerical methods that converge to the method of least squares (Langhaar), 165

Numerical methods for function minimization. Comparison of some conjugate direction procedures for function minimization (Sorenson), 421

O

Optimum control. Dynamic control of biharmonic processes (Kim), (BC), 415

Orthogonal functions. Some orthogonal functions which are linear combinations of square-wave functions (Sox & Harrington), 43

P

Paper, engineering properties. Problems in all-paper construction: A pilot study (Spillers & Testa), 443

Parameter estimation. Bayesian identification of nonlinear systems (Mortensen), 213

Pattern classification. On a convex function useful in determination of linear discriminant functions (Butz), 291

Physical system theory. Power-conserving transformations: Physical interpretations and applications using bond graphs (Karnopp), 175

Popov criterion. Stability criteria for nonlinear RLC networks (Goldstein & Frank), 351

Probability optimization. Approximate optimal controls that maximize the probability of entering a target manifold (Luh & O'Connor), 1

Properties of a sequence of non-Gaussian probability density functions. A sequence of probability functions on the Euclidean n-space and its limit (Ahmed & Glinski), (BC), 151

R

Realization of nth order terminal conductance matrices. Realization of nth order matrices with two-tree port structures (Jambotkar & Tokad), 245

Redundancy. Synthesis of error-correcting threshold gate networks (Bargainer & Coates), 377

Rigid–plastic analysis. Rigid–plastic analysis of a simply supported circular plate due to dynamic circular loading (Conroy), 121

S

Sandwich construction. Problems in all-paper construction: A pilot study (Spillers & Testa), 443

Solution to diffusion equation. Approximate optimal controls that maximize the probability of entering a target manifold (Luh & O'Connor), 1

Solutions of differential equations. On the solutions of finite dimensional time-invariant transport equations (Wang), 115

Stability. Limit cycles with stability of the first level (Gurel), (BC), 235

Stability analysis for a fourth-order nonlinear discrete-time system (Raju & Li), (BC), 67

Stability criteria for nonlinear RLC networks (Goldstein & Frank), 351
Stability of autonomous systems. A compensation technique for certain nonlinear autonomous systems (Monier), (BC), 319
Stability of stochastic systems. Stochastic stability in nonlinear oscillating systems (Ku), 305
Statistical classification. On a convex function useful in determination of linear discriminant functions (Butz), 291
Stochastic control. Approximate optimal controls that maximize the probability of entering a target manifold (Luh & O'Connor), 1
Stochastic differential equations. Bayesian identification of nonlinear systems (Mortensen), 213
Stochastic stability of nonlinear systems. Stochastic stability in nonlinear oscillating systems (Ku), 305
System dynamics. Power-conserving transformations: Physical interpretations and applications using bond graphs (Karnopp), 175
Systems identification. Bayesian identification of nonlinear systems (Mortensen), 213

T

Theoretical laser physics. A class of periodic solutions to the two-dimensional cubic differential equation (Silberg), 17
Thin films. Immittance characterization of tapered multiple layer RC lines (Bassett), 453
Threshold logic. Synthesis of error correcting threshold gate networks (Bargainer & Coates), 377
Time responses of linear networks. Numerical method for transient responses of linear networks with lumped, distributed or mixed parameters (Vlach), 99
Topological synthesis of n-port-R-networks. Realization of nth order matrices with two-tree port structures (Jambotkar & Tokad), 245
Transition length phenomena. A class of periodic solutions to the two-dimensional cubic differential equation (Silberg), 17
Transport equations. On the solution of finite dimensional time-invariant transport equations (Wang), 115
Two-dimensional solidification. Combined free and forced convection with two-dimensional solidification over a horizontal semi-infinite plate (Miller & Jiji), 235
